A Walk on the  Side

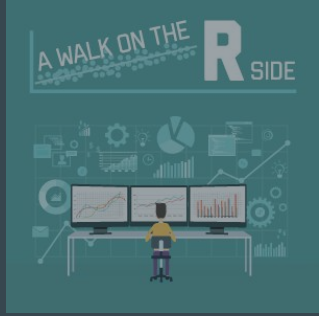
an introduction to R for data analysis

• • •

GW Libraries/STEMWorks Workshop
November 2017

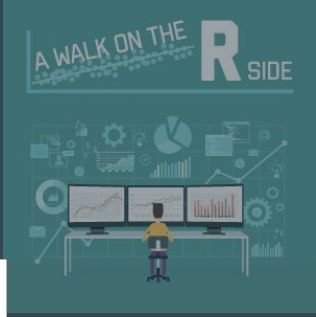
go.gwu.edu/gwlibrworkshop

Agenda



- About R and RStudio
- Hands-on:
  - variables
  - logical expressions
  - values, vectors, and data frames
  - R Studio projects
  - reading in data
  - exploring data
  - data wrangling: cleaning and reshaping
  - data visualization
  - data analysis
  - functions
- Resources for further learning

Acknowledgments



software carpentry

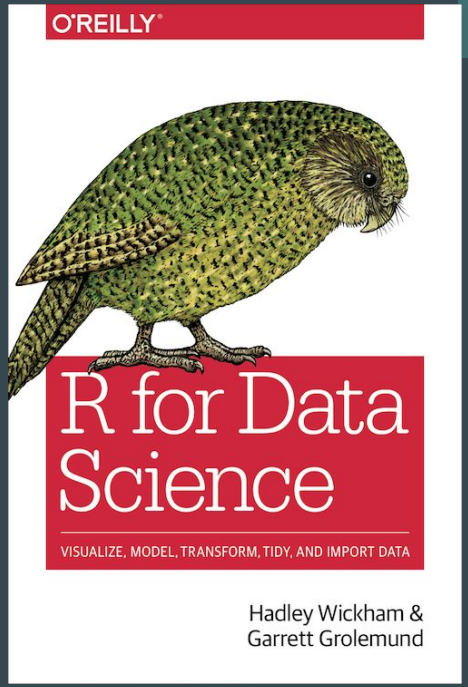
Teaching basic lab skills for research computing

DATA CARPENTRY

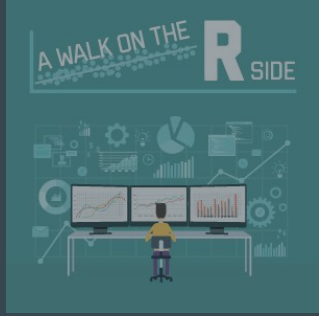
BUILDING COMMUNITIES TEACHING UNIVERSAL DATA LITERACY

R Tutorial

An R Introduction to Statistics



Workshop Housekeeping



Ask questions!

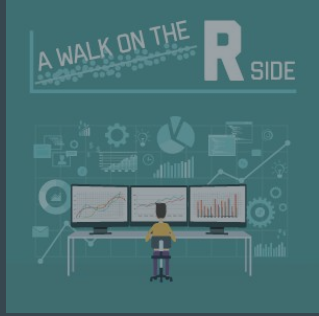
Respect every question and person asking the question

Help each other out!

If something is confusing in the workshop,
it probably needs improvement; let us know.

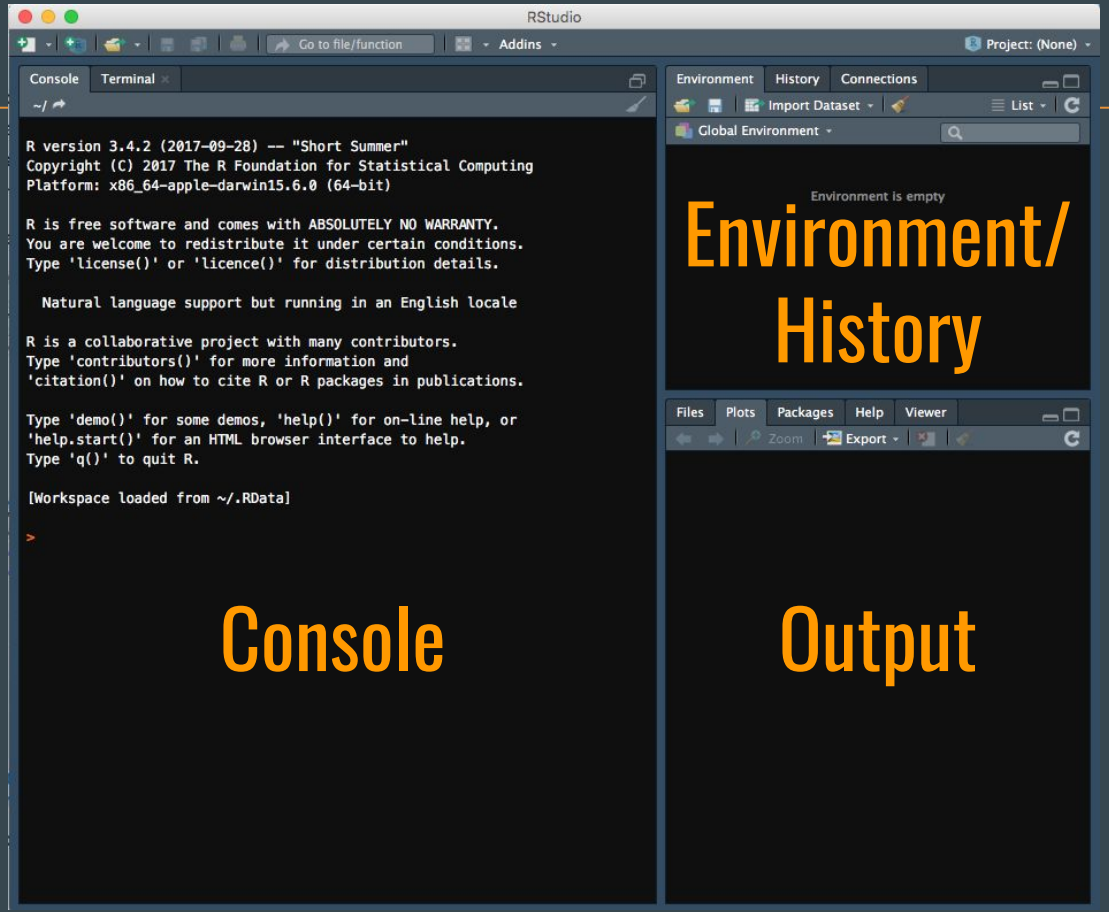
Stay as long as you like

About R



- Open source
- For statistical computing and graphics
- CRAN
  - R packages
  - R events
  - R journal
  - ...

R Studio



RStudio
Go to file/function
Addins
Project: (None)
Console
Terminal
~/
R version 3.4.2 (2017-09-28) -- "Short Summer"
Copyright (C) 2017 The R Foundation for Statistical Computing
Platform: x86_64-apple-darwin15.6.0 (64-bit)
R is free software and comes with ABSOLUTELY NO WARRANTY.
You are welcome to redistribute it under certain conditions.
Type 'license()' or 'licence()' for distribution details.
Natural language support but running in an English locale
R is a collaborative project with many contributors.
Type 'contributors()' for more information and
'citation()' on how to cite R or R packages in publications.
Type 'demo()' for some demos, 'help()' for on-line help, or
'help.start()' for an HTML browser interface to help.
Type 'q()' to quit R.

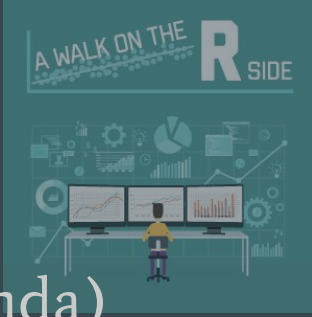
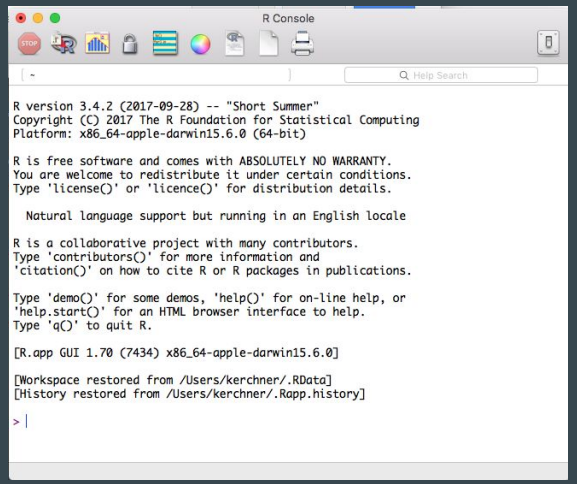
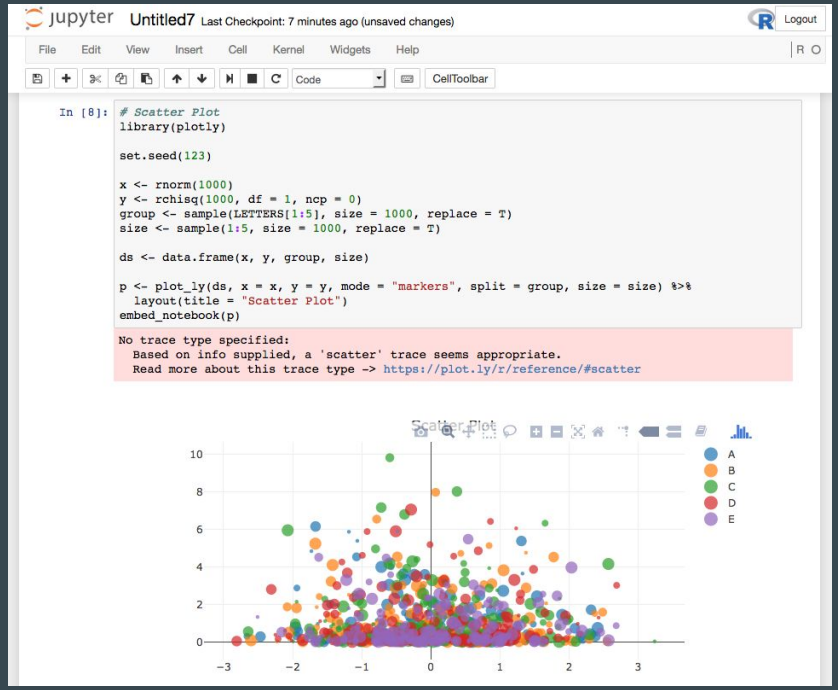
Other Ways To Use R

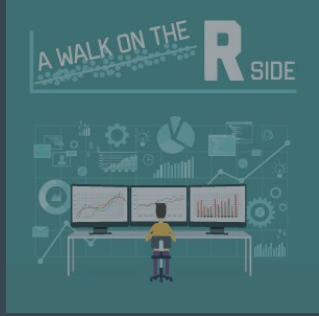


Plain R console

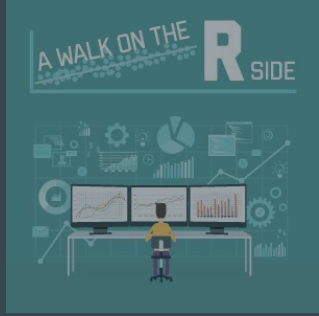


Jupyter Notebook (e.g. in Anaconda)





Let's tRy it!

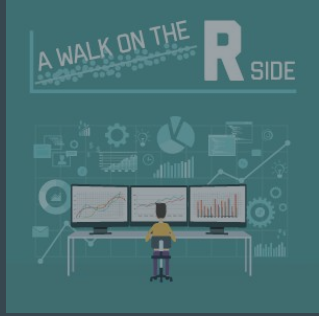


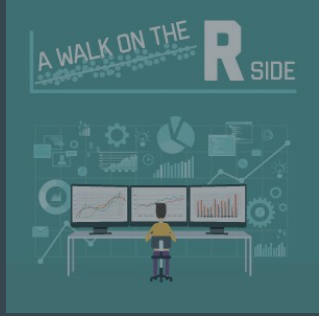
Variables

- Try using R as a "calculator" in the Console
  - Try some mathematical functions, too
- Create some variables
  - variable naming
  - `<-` for assigning values to variables (Option - on Mac, Alt - on Win)
  - numeric, character, logical
  - Watch the Environment pane!
  - `class()`
  - Coercion w/ `as.integer, as.character, as.logical, as...`

Logical Expressions

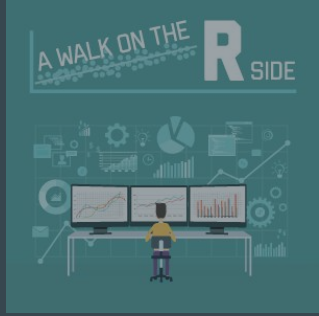
- Operators include:
  ==, <, >, ! (not), & (and), | (or), etc.



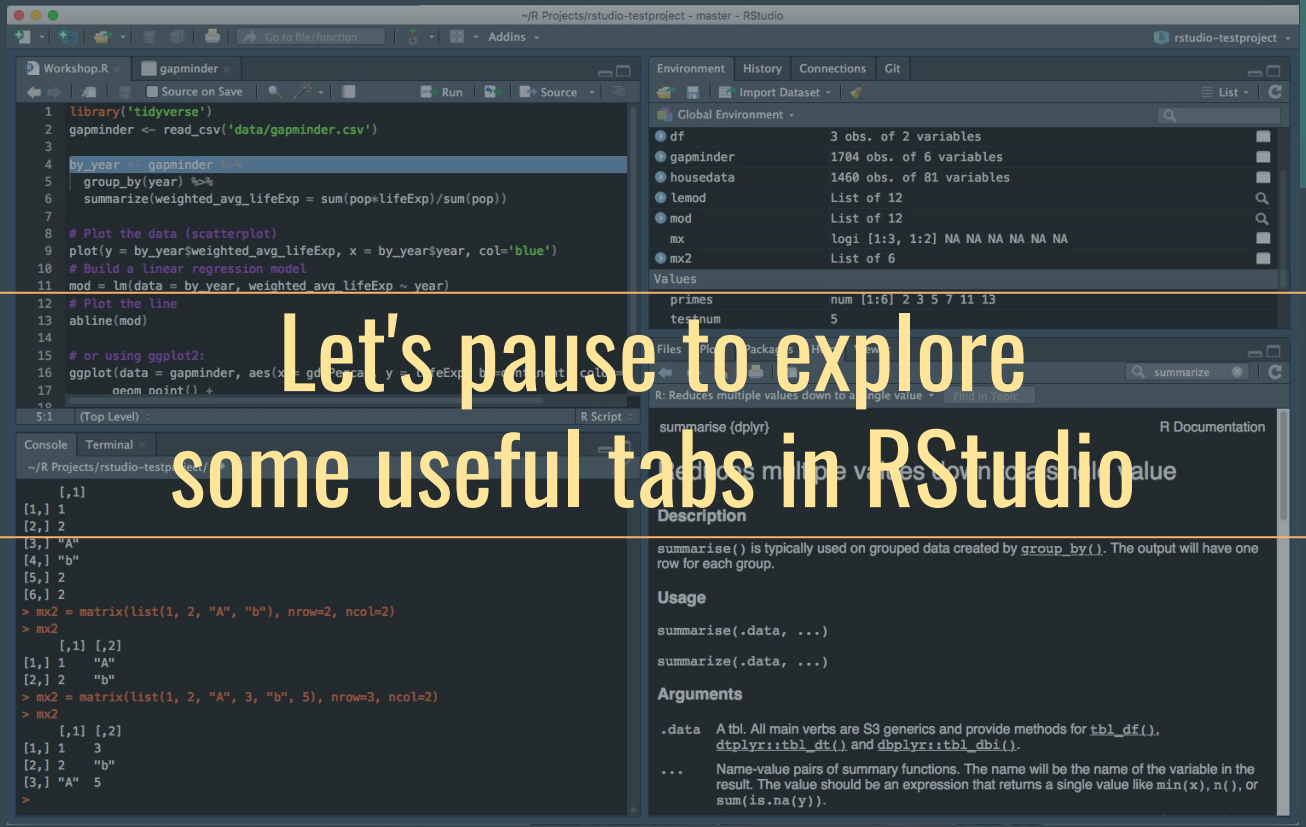


Vectors

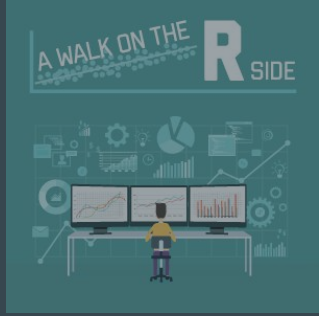
Vectors



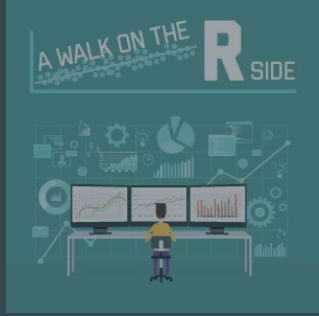
- A vector is
  - A sequence of data elements (components) all of the same type.
- Create vectors with c()



Let's pause to explore some useful tabs in RStudio

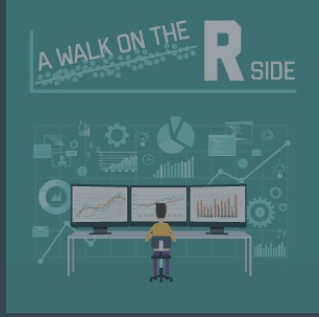


Data Frames



Data Frames

- A data.frame stores a data table
- Comprised of vectors of equal length. Vectors become columns.
- Columns and rows can have names.
- `tibble` (from the tibble package) has some advantages over `data.frame`



To summarize...

Value

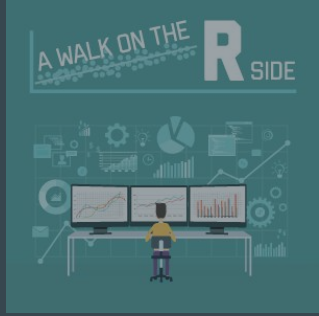
10.2

Vector

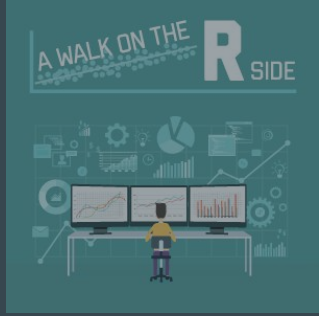
1	10.2
2	11.3
3	11.5
4	12.0

Data Frame

	time	temp	boiling
1	51	10.2	FALSE
2	58	11.3	FALSE
3	63	11.5	FALSE
4	70	12.0	TRUE

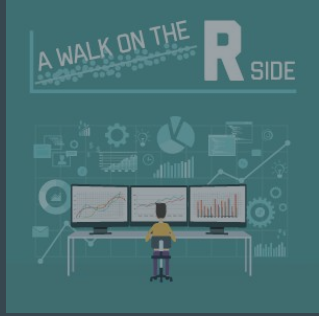


A brief word on `list` and `matrix`



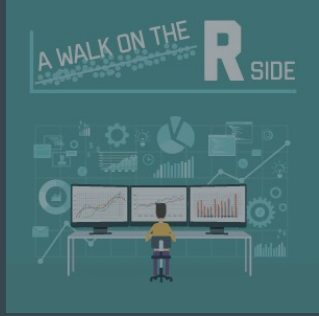
Projects in RStudio

Projects in RStudio

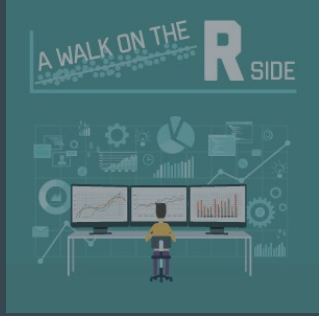


Recommendations:

- Use [Github for] **version control**!
- Create folders to keep things organized

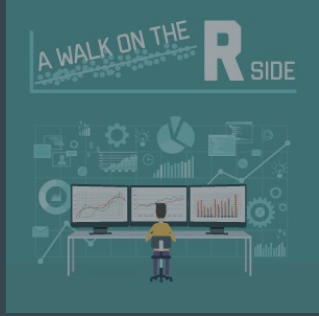


It's time to import some data!



Data Importing

- Prepare data as "tidy"
  - rectangular
  - one table per file
  - rows are observations, columns are variables
- Formats: CSV, TSV, Excel, Fixed-Width, JSON... and with the right packages: Stata, SPSS, SAS... (using `foreign`)
- A word about "big data"



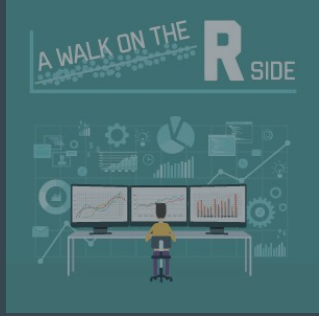
dplyr

readr

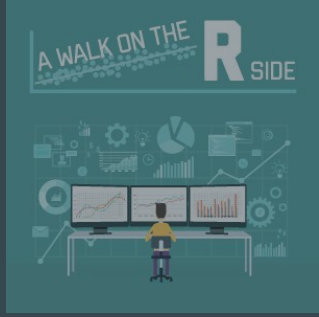
tidyr

R Packages

Installing and loading R packages



- install.packages('mypackage')
- library('mypackage') -- or check the box on the Packages tab in RStudio

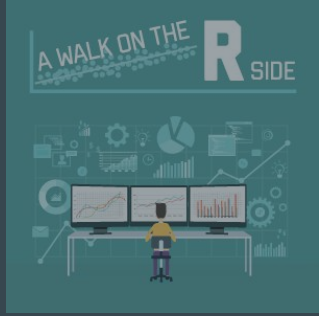


Tidyverse Core Packages

tidyverse.org

- ggplot2 - graphics
- dplyr - data manipulation
- tidyr - tidying data
- readr - reading in data
- tibble - modern data frame
- purrr

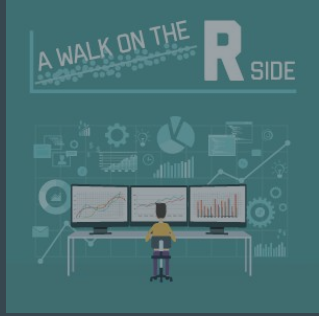
Other often-used R packages



Basic stats functions, like ANOVA	MASS
Mapping	tmap, tmaptools, leaflet
Analyzing 2D and 3D shapes	geomorph
Genomic data	bioconductor
Cluster analyses	cluster
Time series data	forecast
Text mining	qdap, sentimentr, tidytext
graph/network analysis	igraph, sna
Interactive web visualizations	shiny

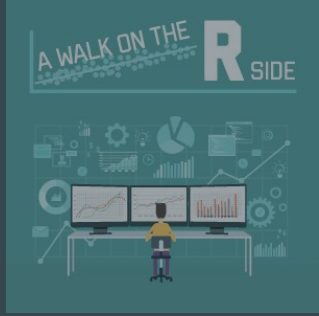
Exploring Data

- head, tail
- subsetting
- slicing and dicing



Data Wrangling

Data Transformation using the dplyr package



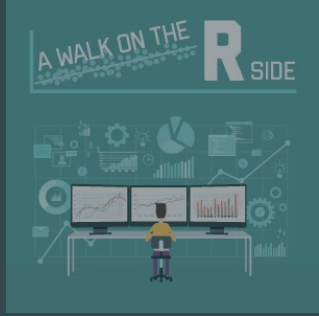
- filter()
- arrange()
- select()
- mutate()
- summarize()
- group_by()
- ...

You will want to use a "pipe": %>%

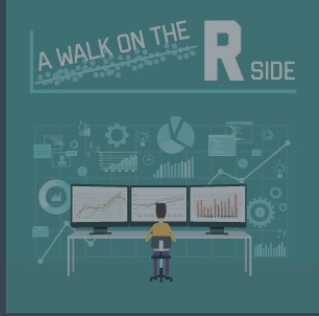
(shortcut: control-shift-M)

Data Tidying with dplyr

- gather()
- spread()
- separate()
- unite()

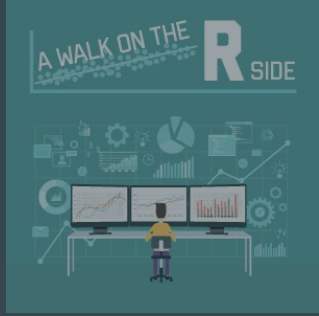


Joining with dplyr



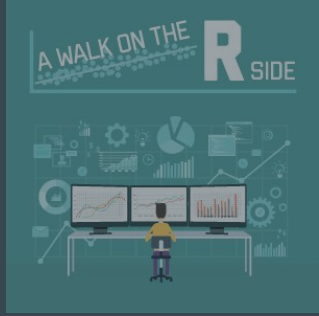
"Merges" tables together

- left_join()
- right_join()
- ...



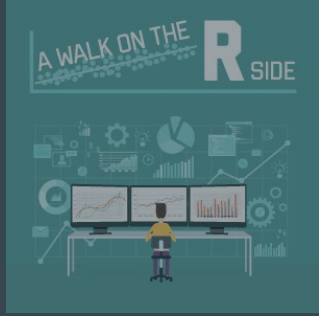
Data Visualization

Data Visualization

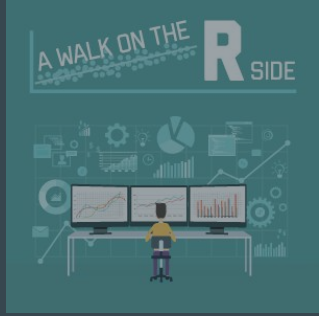


3 main packages:

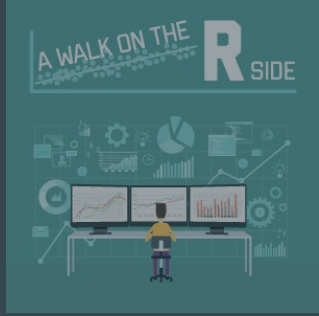
- "base R"
- lattice
- ggplot2



Data Analysis



Functions



R Markdown
