

# A Walk on the Side

an introduction to R for data analysis

...

GW Libraries/STEMWorks Workshop  
Spring 2018

[go.gwu.edu/gwlibrworkshop](https://go.gwu.edu/gwlibrworkshop)

# Goals

# Agenda

- About R and RStudio
- Hands-on:
  - variables
  - logical expressions
  - values, vectors, and data frames
  - R Studio projects
  - reading in data
  - exploring data
  - data wrangling:  
cleaning and reshaping
  - data visualization
  - data analysis
  - functions
  - reports
- Resources for further learning

# Acknowledgments

Teaching basic lab skills  
for research computing

**DATA CARPENTRY**

BUILDING COMMUNITIES TEACHING UNIVERSAL DATA LITERACY

**R Tutorial**

An R Introduction to Statistics

# Workshop Housekeeping

Ask questions!

Respect every question and person asking the question

Help each other out!

If something is confusing in the workshop,  
it probably needs improvement; let us know.

Stay as long as you like

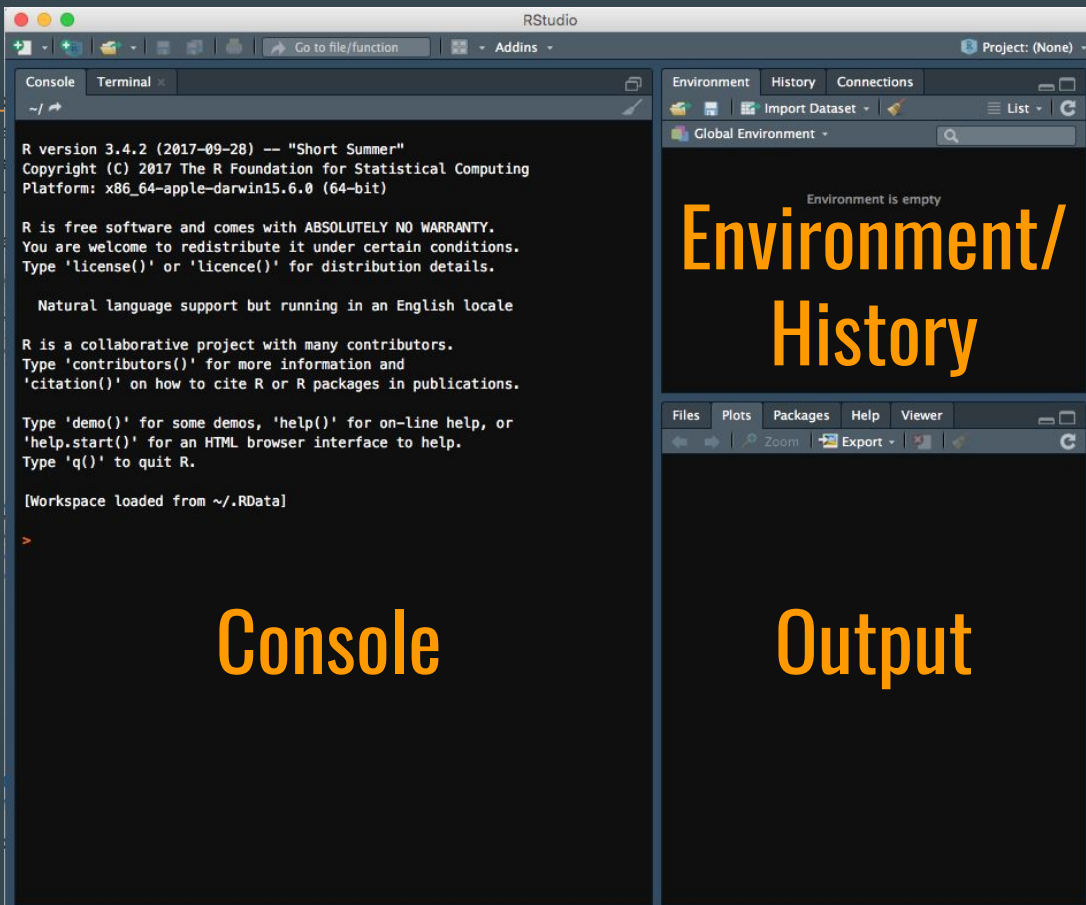

# About R

- Free/Open source
- For statistical computing and graphics
- CRAN - [r-project.org](https://r-project.org)
  - [R packages](#)
  - [R journal](#)
  - ...

# R Studio

The screenshot displays the RStudio application window. The top toolbar includes icons for file operations and a menu bar with 'Go to file/function' and 'Addins'. The main interface is divided into four panes. The left pane is the 'Console', which contains the R startup message and version information. The right pane is the 'Environment/History' pane, which is currently empty. The bottom pane is the 'Output' pane, which is also empty. The top-right pane is the 'Environment' pane, which shows the 'Global Environment'.

**Console**

```
R version 3.4.2 (2017-09-28) -- "Short Summer"
Copyright (C) 2017 The R Foundation for Statistical Computing
Platform: x86_64-apple-darwin15.6.0 (64-bit)

R is free software and comes with ABSOLUTELY NO WARRANTY.
You are welcome to redistribute it under certain conditions.
Type 'license()' or 'licence()' for distribution details.

Natural language support but running in an English locale

R is a collaborative project with many contributors.
Type 'contributors()' for more information and
'citation()' on how to cite R or R packages in publications.

Type 'demo()' for some demos, 'help()' for on-line help, or
'help.start()' for an HTML browser interface to help.
Type 'q()' to quit R.

[Workspace loaded from ~/.RData]
>
```

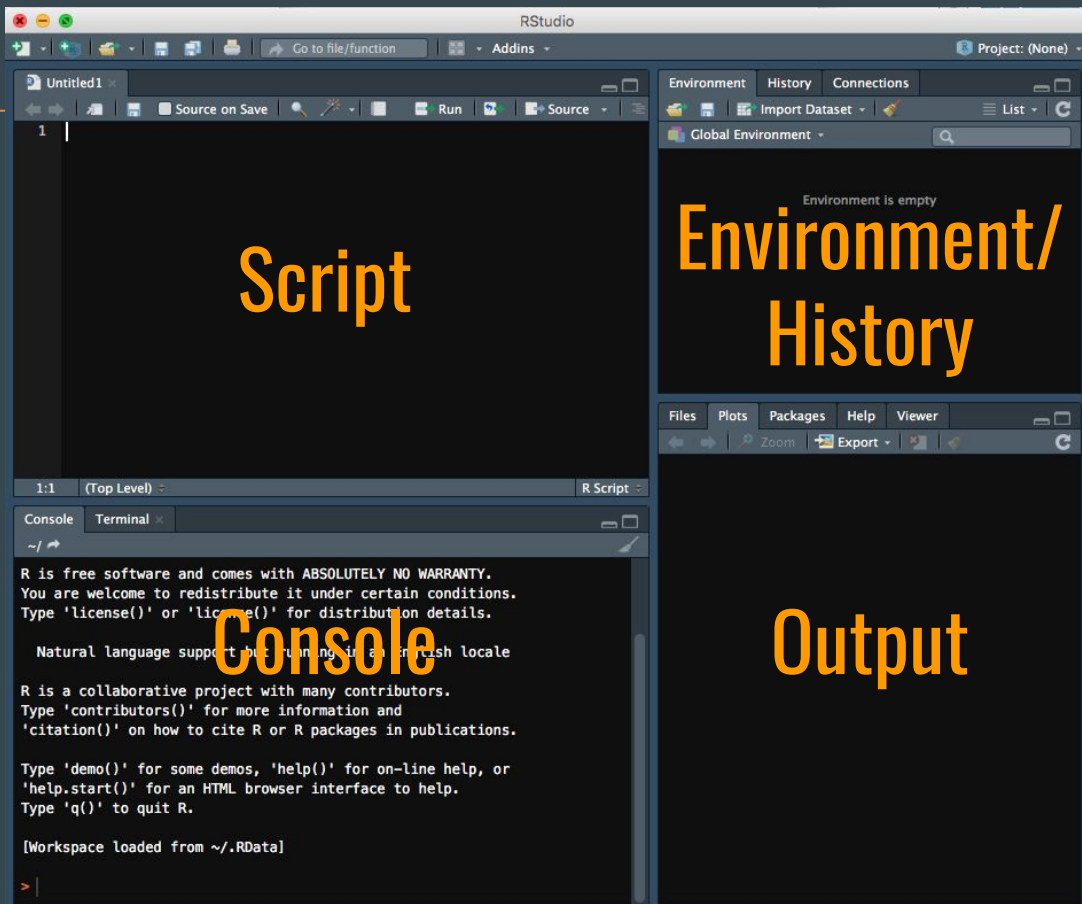

**Environment/History**

Environment is empty

**Output**

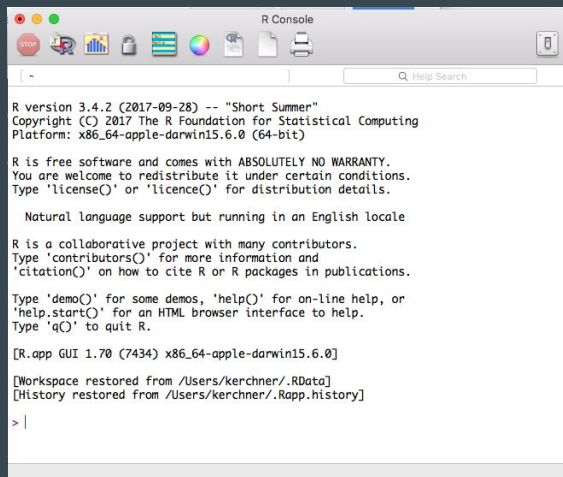

# R Studio

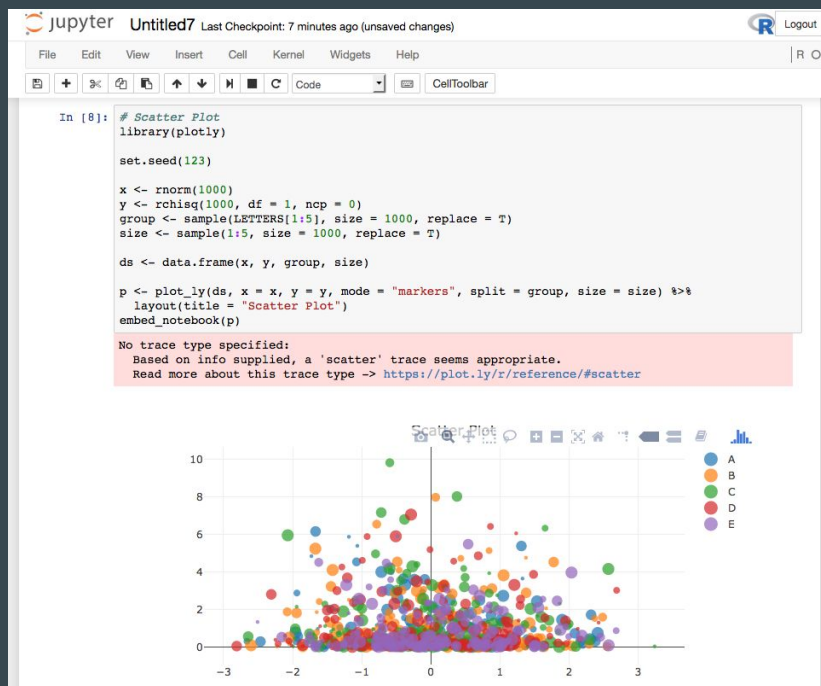

# Other Ways To Use R

Plain R console

Jupyter Notebook (e.g. in Anaconda)

Let's tRy it!

# Variables

- Try using R as a "calculator" in the Console
  - Try some mathematical functions, too
- Create some variables
  - variable naming
  - `<-` for assigning values to variables (Option - on Mac, Alt - on Win)
  - numeric, character, logical
  - Watch the Environment pane!
  - `class()`
  - Coercion w/ `as.integer`, `as.character`, `as.logical`, `as...`

# Logical Expressions

- Operators include:  
==, <, >, ! (not), & (and), | (or), etc.

# Vectors

# Vectors

- A vector is
  - A sequence of data elements (components) all of the same type.
- Create vectors with `c()` (short for "combine")

The image shows the RStudio interface with a large, semi-transparent text overlay in the center that reads: "Let's pause to explore some useful tabs in RStudio". The background shows the RStudio workspace with the following elements:

- Source Editor:** Contains R code for loading data, summarizing, and plotting. The code includes comments and uses functions like `library(tidyverse)`, `read_csv()`, `group_by()`, `summarize()`, `plot()`, `lm()`, `ggplot2`, and `geom_point()`.
- Environment:** Lists objects in the global environment, including `df` (3 obs. of 2 variables), `gapminder` (1704 obs. of 6 variables), `housedata` (1460 obs. of 81 variables), `lemod` (List of 12), `mod` (List of 12), `mx` (logi [1:3, 1:2] NA NA NA NA NA NA), and `mx2` (List of 6).
- Console:** Shows the output of the R code, including the results of `group_by()`, `summarize()`, and `plot()`.
- Files:** Shows the project files, including `gapminder.csv`.
- Help:** The right sidebar shows the documentation for the `summarize()` function, including its description, usage, and arguments.

# Data Frames

# Data Frames

- A `data.frame` stores a data table
- Comprised of **vectors** of equal length. Vectors become columns.
- Columns and rows can have names.
- `tibble` (from the `tibble` package) has some advantages over `data.frame`

# To summarize...

## Value

10.2
------

## Vector

1	10.2
2	11.3
3	11.5
4	12.0

## Data Frame

	time	temp	boiling
1	51	10.2	FALSE
2	58	11.3	FALSE
3	63	11.5	FALSE
4	70	12.0	TRUE

# A brief word on **list** and **matrix**

# Projects in RStudio

# Projects in RStudio

## Recommendations:

- Use [Github for] **version control!**
- Create **folders** to keep things organized

It's time to **import** some data!

# Data Importing

- Prepare data as "tidy"
  - rectangular
  - one table per file
  - rows are observations, columns are variables
- Formats: CSV, TSV, Excel, Fixed-Width, JSON... and with the right packages: Stata, SPSS, SAS... (using **rio** or **haven**)
- A word about "big data" (consider **data.table**)

# R Packages

# Installing and loading R packages

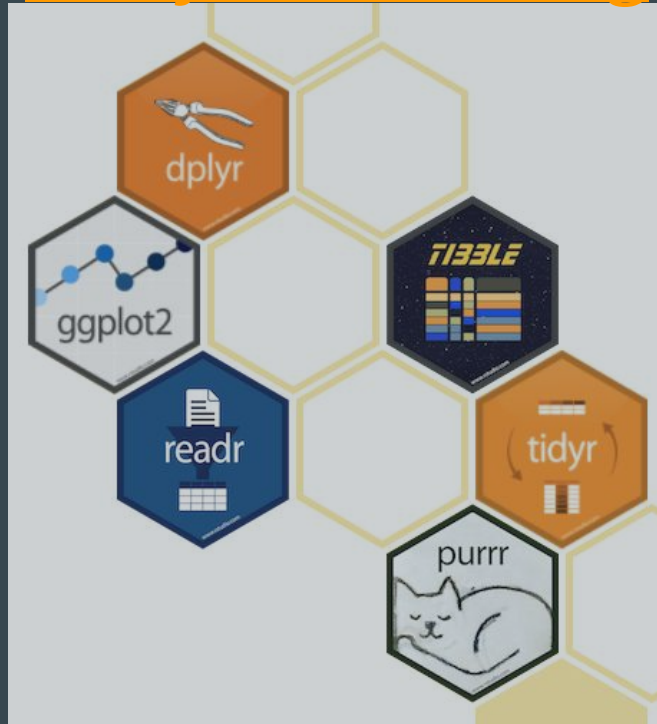

- `install.packages('mypackage')` - or press the Install button on the Packages tab in RStudio
- `library('mypackage')` -- or check the box on the Packages tab in RStudio

# Tidyverse Core Packages

[tidyverse.org](https://tidyverse.org)

- ggplot2 - graphics
- dplyr - data manipulation
- tidyr - tidying data
- readr - reading in data
- tibble - modern data frame
- purrr - functional programming

## Other often-used R packages

Basic stats functions, like ANOVA ▶ MASS

Mapping ▶ tmap, tmaptools, leaflet

Analyzing 2D and 3D shapes ▶ geomorph

Genomic data ▶ bioconductor

Cluster analyses ▶ cluster

Time series data ▶ forecast

Text mining ▶ qdap, sentimentr, tidytext

graph/network analysis ▶ igraph, sna

Interactive web visualizations ▶ shiny

# Exploring Data

- head, tail
- subsetting
- slicing and dicing

# Data Wrangling

[flickr.com/photos/thewomensmuseum/3687975017/](https://www.flickr.com/photos/thewomensmuseum/3687975017/)

# Data Transformation using the dplyr package

- filter()
- arrange()
- select()
- mutate()
- summarize()
- group\_by()
- ...

You will want to use a "pipe": `%>%`  
(shortcut: **control-shift-M**)

# Data Tidying with dplyr

- `gather()`
- `spread()`
- `separate()`
- `unite()`

# Joining with dplyr

"Merges" tables together

- `left_join()`
- `right_join()`
- ...

# Data Visualization

# Data Visualization

3 main packages:

- "base R"
- lattice
- ggplot2

# Data Analysis

# Functions

# R Markdown

# R Markdown

- A format for writing reproducible, dynamic reports with R (as HTML, PDF, MS Word, and more)
- [rmarkdown.rstudio.com](https://rmarkdown.rstudio.com)
- # Header 1  
## Header 2  
*\*Italic\** **\*\*bold\*\***
- Insert R code directly into your document

```
```{r setup}
# your R code goes here
```
```
- Include LaTeX code with \$ or \$\$

# R Shiny

## Classes at GW that teach or use R

Aside from the Data Science and Business Analytics programs:

- PSC 2102 - Fall 2018 (and possibly Summer II, 2018)  
Visualizing and Modeling Politics  
Prof. Eric Lawrence
- PPPA 6085 - Data Visualization
- TBD - Public Health, Prof. Helmchen - Fall 2018
